Summary

Full-stack software engineer building deployed web and AI applications with React, Next.js, TypeScript, Python, and PostgreSQL. Developed GradeLens, an LLM-assisted grading platform with role-based workflows, Canvas integration, and human review. Experience with Dockerized deployment, automated testing, real-time collaboration, and secure cloud data.

EDUCATION

Master of Science, Computer Science **May 2026**
Arizona State University, Ira A. Fulton Schools of Engineering *Tempe, AZ*
- **GPA:** 3.95

Bachelor of Science, Computer Science, Minor in Business **May 2025**
Arizona State University, Ira A. Fulton Schools of Engineering *Tempe, AZ*
- **GPA:** 4.0
- **Achievements:** Summa Cum Laude, Moeur Award

EXPERIENCE

Arizona State University **Aug 2026 - Present**
Research Assistant
- Develop GradeLens, an LLM-assisted autograder that generates editable rubrics and criterion-level evidence for required instructor review.
- Implemented Next.js, React, TypeScript, Prisma, PostgreSQL, and S3-compatible storage with role-based access, encrypted credentials, Canvas synchronization, and Canvas/Gradescope exports.
- Containerized the application with Docker for Render and Neon deployment, adding Vitest and ESLint checks to the production build gate.

Beam Group **Aug 2024 - May 2025**
Extern Full Stack Developer *Remote*
- Built and deployed a React, Gemini API, Firebase, and Vercel application that helps seniors navigate government retirement-benefit forms.
- Led user-centered design on a five-person team and implemented Firebase authentication and real-time storage for persistent sessions.

Arizona State University **Aug 2023 - May 2026**
Graduate and Undergraduate Teaching Assistant *Tempe, AZ*
- Built 25 Python unittest and Gradescope test suites across 12 C++ lab modules, reducing manual review for 150+ submissions per assignment.
- Mentored 1,000+ students across six mathematics and computer science courses through labs, exam reviews, and transition sessions.

PROJECTS

Mise - Kitchen Inventory and Meal Planning Platform GitHub
Personal Project
- Developed a React, TypeScript, and Vite kitchen application with inventory tracking, recipe ranking, meal planning, barcode scanning, receipt OCR, and shared grocery lists.
- Implemented Supabase Auth, PostgreSQL Row Level Security, Realtime synchronization, offline recovery, and authenticated Vercel functions; tested core workflows with Vitest.

AutoResearch - Multi-Agent AI Research Pipeline GitHub
- Created a five-agent Python pipeline that retrieves web sources, critiques coverage gaps, and produces source-backed reports with GPT-4.1-mini.
- Validated agent communication with Pydantic schemas, JSON parsing, confidence scores, re-retrieval, and retry handling; exposed reports through Streamlit.

SKILLS

- **Programming Languages**: Python, TypeScript, JavaScript, SQL, C++, Bash, HTML/CSS, Java
- **Web and Data**: React, Next.js, Vite, Tailwind CSS, Node.js, PostgreSQL, Prisma, Supabase, Firebase
- **Testing and Deployment**: Vitest, Python unittest, ESLint, Git, Docker, Render, Vercel, Neon
- **AI and APIs**: OpenAI, Anthropic, Groq, Gemini, Pydantic, Streamlit, Canvas API, OCR
