Summary

Full-Stack AI Engineer and Computer Science graduate student with research and industry experience building AI-powered applications. Developed GradeLens, an AI-powered autograder, and built a full-stack conversational AI chatbot, applying TypeScript, JavaScript, React, and LLM APIs to deliver user-focused software. Experienced with AI-assisted development tools, full-stack engineering, and modern testing and deployment workflows, with Python and C++ automation that reduced manual grading time for 150+ submissions per assignment.

EDUCATION

Master of Science, Computer Science **2026**
Arizona State University, Ira A. Fulton Schools of Engineering *Tempe, AZ*
• **GPA:** 4.0

Bachelor of Science, Computer Science, Minor in Business **2025**
Arizona State University, Ira A. Fulton Schools of Engineering *Tempe, AZ*
• **GPA:** 4.0
• **Achievements:** Summa Cum Laude, Moure Award (recognizing academic excellence)

EXPERIENCE

Arizona State University **August 2026 - Present**
Research Assistant
• Develop and maintain GradeLens, an AI autograder using LLM APIs and JavaScript to create rubrics, grade submissions, and provide criterion-level feedback, reducing manual grading effort.
• Design a multi-provider LLM pipeline using Groq, OpenAI, and Anthropic that outputs structured JSON grades, encrypts API keys, and adds human-in-the-loop review before finalizing scores, improving grading accuracy and ensuring data-privacy compliance.
• Build and deploy the full-stack application using Next.js, TypeScript, and Prisma/SQLite on Railway, delivering course workspaces, roster/TA access, instructor overrides, and Canvas/Gradescope CSV export with a CI lint/test gate, streamlining instructor workflow and accelerating grade release.

Beam Group **August 2024 - May 2025**
Extern Full Stack Developer *Remote*
• Built a full-stack conversational AI chatbot (React.js, Gemini API, Firebase) that helps seniors understand and complete government pension and retirement-benefit applications, deployed on Vercel for real-time use.
• Led user-centered design decisions on a 5-person team to simplify multi-step government forms for elderly, low-tech-fluency users, improving task completion and overall satisfaction.
• Integrated Firebase authentication and real-time data storage to support persistent, secure user sessions across the application.

Arizona State University **August 2023 - May 2026**
Graduate and Undergraduate Teaching Assistant *Tempe, AZ*
• Engineered Python and Bash automation scripts on Gradescope for C++ and Python courses, reducing manual grading time for 150+ submissions per assignment
• Mentored 1,000+ students across 6+ computer science and mathematics courses, simplifying complex concepts and improving course completion and student feedback.
• Led engineering labs, exam reviews, and transition sessions, improving attendance and exam performance.

PROJECTS

Mise - Kitchen Inventory and Meal Planning Platform GitHub
• Built and deployed a responsive kitchen-management platform featuring inventory tracking, expiration alerts, natural-language food entry, recipe matching, serving adjustments, and automated grocery-list generation.
• Designed a secure Supabase/PostgreSQL backend with authentication, household-scoped data models, cloud synchronization, and Row Level Security for protecting user data.
• Applied an AI-assisted engineering workflow for product ideation, rapid prototyping, code generation, debugging, and test planning; independently reviewed generated code, resolved edge cases, and validated production behavior.

AutoResearch - Multi-Agent AI Research Pipeline GitHub
• Built a five-agent autonomous research pipeline (Planner → Retriever → Summarizer → Critic → Writer) using GPT-4.1-mini to transform plain-English questions into structured Markdown reports, with self-critique triggering re-retrieval and confidence-scored fact validation.
• Implemented reliable agent-to-agent communication with strict JSON TypedDict schemas, orchestrator-level validation, and automatic retry logic for malformed outputs.

SKILLS

• **Programming Languages**: Python, JavaScript, TypeScript, SQL, C++, Java, Bash, HTML/CSS
• **Frontend**: React, Next.js, Vite, Responsive Web Design
• **Backend and Database**: Node.js, FastAPI, Supabase, PostgreSQL, SQLite, Prisma, Firebase, REST APIs, Serverless Functions
• **Testing and DevOps**: Vitest, pytest, ESLint, Git, GitHub, CI/CD, Vercel
• **AI & Intelligent Systems**: LLM APIs, Retrieval-Augmented Generation, Prompt Engineering, OCR, Natural-Language Parsing, Recommendation Systems
• **Coursework**: Data Structures, Algorithm Development, Object-Oriented Design, Software Testing

EXTRACURRICULAR

Board Games Club at ASU **July 2024 - May 2026**
Founder and President
• Grew the club from a founding idea to a 280+ member community; secured $1.8K in funding through technical/organizational leadership.

CodePath **June 2025 - Present**
Community Member

Society of Asian Engineer and Scientists **October 2022 - May 2026**
Member
